
$p(q \mid r) \propto p(r \mid q)\, p(q)^{\delta}$
$\delta < 1$: fast prior decay
Odor 1
Odor 2
Odor 3
Observe odor $\rightarrow k$
$r_i \in \{0, 1\}$
Bern(q)
q
sample $\tilde{q} \sim P$
leave if $\tilde{p} < \bar{R}$
High
Low
Null
$P_1 \rightarrow$ next prior (τ_b, slow)
